SOV/92-58-7-26/37

AUTHOR: Goncharov, A. Chief of the Young Communist League at the Third Starogrozneft' Oilfield.

TITLE: A Wide Range of Specializations Should be Mastered (Za ovladeniye professiyami shirokogo profilya)

PERIODICAL: Neftyanik, 1958, Nr 7, pp 27-28 (USSR)

ABSTRACT: In addition to the campaign initiated by young staff members at oilfields, refineries, and other enterprises for limiting petroleum product losses, every effort is now being made to save metal, fuel, water, steam, and electric power, etc. Now they also realize that it is highly advisable to acquire a specialization in more than one field and to be able to handle different jobs. The interruption of the normal course of oilfield operations can be easily avoided if specialists in a certain field of operations are also able to carry out some operations in adjacent fields. The idea of acquiring and combining several specializations is now widespread among young workers engaged in petroleum production, and they are trying to obtain training in different fields so that a carpenter, for example,

Card 1/2

SOV/92-58-7-26/37

A Wide Range of Specializations (Cont.)

might be able to perform the duties of a derrick assembler, fitter, builder, etc. As a result oil well operations are not interrupted as often as before. By following this new principle the Starogrozneft' Petroleum Production Administration has exceeded its annual production plan, in boosting production and in reducing the cost of operations. It is felt, however, that further efforts should be made in this direction and that well trained specialists should be put in charge of carrying out the educational program set up for young trainees. Moreover, the rate of remuneration of workers specialized in different fields should be revised and made more attractive.

Veterinariya, Vol 30, No 1, pp 30-32

Results of expts conducted over a period of 2 years
on 7,330 deer showed that they are susceptible to
both the exptl and natural infection with tubercu-
losis. Although tuberculosis is rarely found in
deer on their natural pasturage, the tundra, it is
often found among those used as draft animals, Bron-
chopneumonia of diplococcus etiology is often found

256T55

among young animals. A polyvalent diplococcus
vaccine produced encouraging results. These re-
sults are not conclusive enough, however. Further
study of this specific preventive method is
necessary.

Mineralogical and Geological Chemistry

The origin of hydrogen in natural gases. A. I. Gon-
charov and E. I. Kotelovskaya. (Moscow: Khim. Prom., 1977).
148 p. 18 cm. 1000 copies. 1000 rub. 1000 rub. 1000 rub.
This book is a collection of papers presented at the 1st International Symposium on the Origin of Natural Gases, held in Moscow, U.S.S.R., in 1976. The papers are devoted to the study of the origin of hydrogen in natural gases. The book is written in Russian and contains 148 pages. It is published by Khim. Prom. in Moscow. The price is 1000 rubles. The book is available in 1000 copies.

AUTHORS: Goncharov, A.M., Tarantovich, A.S.

TITLE: Transistor switching circuits for magnetic drum
memory heads

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy.
Radiofizika, v.5, no.1, 1962, 165-17

TEXT: The authors apply load-sharing matrices to the problem of read-write head selection on a magnetic drum. After a brief review of the principles a system for 32 tracks is described. No quantitative data are given on perturbations in unselected heads, it being merely said that the circuit "ensures the absence of perturbations in unselected heads". As is the case with load-sharing matrices in selection of core memories, failure of one or two drivers does not derange the selection of the desired head "while the noise in the other channels is insufficient to yield any appreciable signal". There are 5 figures.

TITLE: TEVM digital computer^{16,44}

CITED SOURCE: Tr. po vopr. primeneniya elektron. vychisl. mashin v nar. kh-ve. Gor'kiy, 1964, 171-173

TOPIC TAGS: digital computer, triple address system, computer design, computer performance range / TEVM computer, TEVM digital computer

TRANSLATION: The TEVM digital computer was designed for calculations used in planning production technology, including the process and routing of flowsheets based on pre-evolved algorithms. It is characterized by a requirement for storage of a number of element symbols in its memory system. It represents a triple address unit and operates on a system with a comma fixed after 18 digits. The total number of digits in a term is 48 (one number or one command). The operation code is expressed by 6 digits, another 6 digits are used

Card 1/2

for recording special instructions and the remaining digits are divided between three addresses. The unit is equipped with four memory systems: 1) a magnetic operating memory, capacity 512 terms, rotation period 6 msec; 2) an intermediate memory on a magnetic drum, capacity 1024 terms, average rotation period 10 msec; 3) permanent memory on a magnetic drum, capable of data readout only, capacity 2048 terms, average rotation period 10 msec; 4) magnetic tape with a capacity of 100,000 terms. The computer operates on a frequency of 25 kc, power consumption is 3 kw, output rate 20 terms/sec. A total of 39 commands can be performed; the unit operates at an average speed of 1500 operations per second. The unit employs semiconductors (4000 triodes), an integrator in the form of a trigger register with a continuous carry and without provision for shifts and a data input system either from a manual keyboard or via a tape reading photoinput system. The unit occupies 50 m². Bibl. with 7 titles, 1 illustration. N. S.
